Subject: EOLIS Air Manager efficiency on 2019-nCov

To whom it may concern,

EOLIS Air Manager, our French professional air purifier dedicated to all complex health situations, reduces efficiently the airborne propagation of viruses, **including coronaviruses** such as 2019-nCov, thanks to its unique combination of technologies: 1) a **biocidal virucidal prefilter**, 2) a **EN1822-4 certified medical HEPA filter** with up to 99,97% efficiency on a coronavirus of ~ 120-150 nm size, 3) OSRAM PURITEC® HNS® (made in Germany) **germicidal virucidal UV-C lamps** and 4) a reliable, controlled and safe **Active Oxygen exclusive technology**, to complete the virucidal treatment combination.

Our HEPA filters, made in France, rigorously manually controlled and unitary certified according to EN 1822-4 European Norm, are an essential requirement for a promise of quality and high efficiency.

EOLIS Air Manager is the first and only air purifier verified through the Environmental Technology Verification (ETV) of the European Commission. It includes a patented exclusive technology giving a real time indication of the effective filter clogging to maintain at all time a high-performance level and guarantee a clean healthy air. Our air purifiers are 100% made in France, according to ISO 9001 standards, synonym of excellency, traceability and rigour of French quality.

Experts in indoor air quality since 2009, we regularly equip healthcare facilities as well as nurseries and schools, to truly protect sensitive population, such as ill and elderly people or children.
